---

Thanks Donna. I went ahead and routed all the procurement documents for approval. If there are any major changes and I get them by Wednesday I can probably pull the documents back and resubmit without disrupting our schedule. Otherwise, I can address with a change order to prevent delaying SMG's start.

Thanks,  
-Tony

Hi Tony,

I have no comments on the proposal and the other reviewers at EPA and ATSDR will probably not have comments until they review the actual workplan. I have asked KDEP to let me know by COB Wed if they have any comments so I hope to send you something Wed or Thursday just to verify that.

Just wanted to let you know we are moving on it!

---

Donna - Attached is a revised scope from our consultant Smith Management Group (SMG) for the development of the specified work plan. This is a very tight schedule, however, SMG believes they can complete the work by 10/19/12 if they are given notice to proceed before August 29th. Please let me know if you have any comments regarding their proposal. Because of the cost of the work (\$27,000) I need to get Executive Director approval to execute a contract. I am moving forward with the approval process but would need any changes that would impact cost as soon as possible.

Thanks,  
-Tony

**Subject:** Lee's Lane Landfill - Work Plan specifications

Hi Tony,

Thank you for your patience. After a recent conference call, which included EPA, KDEP, and ATSDR, I am including the following specifications for the development of a workplan by the MSD contractor, as we had discussed previously.

- 1) The workplan should propose depths and locations for 5 groundwater monitoring wells on the site, in order to obtain information on groundwater quality, depth, and flow direction. The wells will also be used to obtain subsurface soil samples.
- 2) Locations should be proposed for 40 surface and subsurface soil samples, some of which should be co-located. KDEP will be available to walk the site with you and your contractor to specify certain locations, based on visual evidence or past uses. Areas of exposed waste, areas near the floodwall, and areas of heavy trespassing are priorities.
- 3) All well and sampling locations should be included on a map with GPS locations identified.
- 4) MSD should be prepared to submit any data collected in the standard electronic data delivery format (see attached memo).

The groundwater survey that had been discussed previously will be conducted by EPA. In addition, EPA plans to conduct perimeter soil gas sampling.

EPA, KDEP and ATSDR will be available for a conference call in order to answer any questions regarding the workplan before or during development.

Within 2 weeks, EPA would like written confirmation (email is fine) that MSD is committed to and moving forward on development of the workplan.

The workplan should be received by EPA by COB on October 19. This will allow time for technical review prior to initiating work in January.

Please feel free to contact me if you have any questions!
